

Rewrite each mixed number so that the fraction part is a proper fraction.

1. $2\frac{7}{4}$

2. $3\frac{6}{5}$

3. $1\frac{14}{10}$

4. $4\frac{8}{5}$

5. $2\frac{9}{7}$

6. $11\frac{3}{2}$

Rewrite each mixed number so that the whole-number part is less by 1.

7. $4\frac{1}{2}$

8. $2\frac{3}{8}$

9. $1\frac{9}{10}$

10. $5\frac{4}{5}$

11. $6\frac{2}{7}$

12. $3\frac{2}{5}$

Suppose you want to find the difference $6 - 3\frac{2}{5}$. How would you rewrite 6 as a mixed number?

13. $15 - 3\frac{3}{4}$

14. $9 - 2\frac{7}{8}$

15. $6 - 5\frac{5}{6}$

16. $10 - 6\frac{1}{4}$

17. $3 - 1\frac{4}{7}$

18. $20 - 4\frac{3}{4}$
